# Top 6 reasons to modernize with OpenText Fax Private Cloud

OpenText™ Fax (RightFax) Private Cloud redefines traditional faxing with an exceptionally reliable and secure communication platform, engineered to exceed the stringent requirements of modern IT cloud infrastructures. By moving from on-premises fax servers to a secure, cloud-based environment, organizations can significantly lower operational overhead while enhancing integration across their line of business applications and communication infrastructure.

Are you ready for cloud faxing? Here are six reasons to embrace OpenText Fax Private Cloud:

1 Powered by AI

With OpenText™ Fax Aviator™, faxing evolves from a manual process into a smarter, faster, and more productive experience. AI-driven features like Aviator Assist for instant user guidance, Aviator Route for intelligent delivery, Aviator Summary for quick insights, and Aviator Extract for automated data capture streamline workflows, reduce errors, and unlock actionable intelligence. This helps your business save time and gain a competitive edge.

2 Say goodbye to server headaches

Liberate your IT team by shifting to cloud-based faxing with pay-as-you-go flexibility. Watch your overhead costs shrink while your scalability options explode—all with enterprise-grade security baked in.

Upgrade with a fax leader. OpenText was named a Leader in the 2024 IDC MarketScape for Digital Fax. Building off decades of innovation in digital fax, OpenText continues to blaze a trail of innovation when it comes to cloud fax, interoperability, and reliability.[1]

Upgrade now ›

3 **End-to-end faxing without external telephony carriers**
Fully managed fax delivery uses a tightly integrated, cloud-based transport layer. This eliminates reliance on external SIP trunk providers, local telecom companies, or VoIP vendors, which often lack fax reliability. By removing third-party telephony from the equation, organizations benefit from fewer points of failure, reducing the risk of transmission errors, routing issues, and delayed support when problems occur.

4 **Seamlessly integrate with critical electronic healthcare records**
Imagine sending patient medical records directly from Epic, Meditech, Oracle Health, or Veradigm with just a single click! No more switching applications or disrupting clinical workflows— your staff will thank you.

5 **Work from anywhere, securely**
Send, receive, and access faxes directly from any MFP or mobile device, anywhere. Following where you work just got exponentially easier without compromising your security protocols.

6 **Trust the gold standard in security compliance**
Rest easy knowing your sensitive data is protected by OpenText Fax Private Cloud's impressive certification portfolio. From ISO/IEC 27001 to HIPAA, SOC 2, and PCI DSS Level 1, we've checked every box, so you don't have to worry about regulatory nightmares or compliance gaps.
